SaaS built solo, end to end

PROFILE

Full-stack engineer who takes products from a blank page to production. I single-handedly built Enculture Assessments, a SaaS platform serving 20,000+ users every month — owning product scoping, system design, database architecture, cloud infrastructure and AI features. I think like a product owner, build like an architect, and ship RAG-powered AI that gives grounded, accurate answers.

EXPERIENCE

Full-Stack & AI Engineer @ NHRT Pvt Ltd

Sep 2025 – Present

Enculture & Enculture Assessments · Full-time

- Sole engineer on Enculture Assessments — took it from idea to a production SaaS used by 20,000+ people a month.
- Designed the system architecture and database model for scale, and run the platform on AWS and Vercel.
- Automated build, test and deploy with GitHub Actions CI/CD; containerised services with Docker and Kubernetes.
- Shipped features for Enculture, the company's flagship SaaS product.

Software Developer @ East IT Consulting

Jan 2024 – Jun 2025

Freelance team · US clients · Freelance

- Joined a freelance team as a junior developer and grew into full-stack work for US-based clients.
- Helped build and deploy scalable full-stack applications, from static websites to complete web apps.
- Contributed features to a CRM tool built by the team.

Software Engineer Intern @ RK Info Systems

Dec 2022 – May 2023

Internship

- Built CRUD features across the MERN stack — MongoDB, Express, React and Node.js.
- Learned Java and core software engineering fundamentals.

SKILLS

Frontend

React JavaScript TypeScript

Tailwind CSS HTML & CSS

Backend

Node.js Express REST APIs

Socket.IO Java

Databases

MongoDB Mongoose Schema design

Vector databases

AI

RAG pipelines Embeddings

Semantic search OpenAI API

Ollama / Llama Guardrails

Cloud & DevOps

AWS Vercel Docker Kubernetes

GitHub Actions CI/CD

EDUCATION

Bachelor's Degree · 2023 **79%**

Anurag Group of Institutions, Hyderabad

Intermediate (XII) **97%**

Narayana Junior College, Hyderabad

Secondary School (X) **92%**

Nalgonda, Telangana

PROJECTS

Enculture Assessments

FLAGSHIP

2025 – Present

SaaS assessment platform · Built solo, end to end

- Owned the entire product lifecycle alone – requirements, UX flows, system design, data modelling, frontend, backend, deployment and operations.
- Scaled to 20,000+ monthly active users with a cloud setup on AWS and Vercel, containerised with Docker and orchestrated with Kubernetes.
- Built an AI chatbot and an AI builder on production RAG pipelines – document chunking, tuned embeddings, a vector database and semantic search – so answers stay grounded in real content.
- Set up GitHub Actions CI/CD so every merge is built, tested and shipped automatically, with no manual deploys.

AWS Vercel Docker Kubernetes GitHub Actions RAG

Ask questions about your own documents

- Ingests TXT, Markdown, PDF and DOCX uploads, splits them into overlapping chunks and stores OpenAI embeddings in MongoDB.
- Answers by ranking chunks with cosine similarity, applying a relevance threshold, and grounding GPT-4o-mini in the top passages – with cited sources.
- Added guardrails: input checks block prompt-injection and abuse, and a grounded system prompt keeps the model from inventing answers.

Node.js Express MongoDB OpenAI Embeddings Docker

Personal AI Agent

2026

Self-hosted LLM assistant with memory

- Real-time chat that streams tokens over Socket.IO from a self-hosted Llama 3.2 model running on Ollama.
- Persists conversations and user memories in MongoDB; a prompt builder injects them so the agent remembers context.
- Secured with JWT auth, bcrypt, Zod validation, Helmet and rate limiting; structured logging with Winston; Dockerised for AWS EC2.
